## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-28 are drawn to the method for controlling a wind mill by regulating torque in two modes of operation with variable rotor speed and fixed rotor speed, classified in class 363, subclass 13.
  - II. Claims 29-58 are directed to the components of operational functions of the electrical scheme for controlling windmill, classified in class 290, subclass 44.

The inventions are distinct, each from the other because of the following reasons:

2. In the instant case the different inventions of group I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of group II is the electrical scheme for controlling the windmill, which has a separate utility in which various electrical functions can be applied to control the operation of the windmill. See MPEP § 806.05(d). There is a burden on the examiner to search two distinct inventions, which would require search of two different arts.
